## Question 1

1 / 1 pts

Match each word to its definition.

| | | |
|---|---|---|
| Correct! | genetic expression | whether a gene is turn |
| Correct! | genotype | an individual organism |
| Correct! | phenotype | an individual organism |
| Correct! | chromosomes | structures within the c |
| Correct! | DNA | a hereditary material n |
| Correct! | Genes | meaningful sections o |

## Question 2

1 / 1 pts

In order to study how genes and environment interacts, behavioral genetics research uses methods like comparing monozygotic to dizygotic twins, or comparing adoptive relatives to biological relatives.

Correct!

- (selected) True
- False

## Question 3

1 / 1 pts

How does Evolutionary Theory (ET) differ from Intelligent Design Theory (IDT)?

- According to ET, natural selection improves organisms, whereas IDT claims that natural selection is not enough for how much humans have improved, there must be an intelligent power that intervened.
- According to ET, the variation between species comes from 'natural selection', whereas according to IDT, it comes from 'artificial selection'.

Correct!

- (selected) ET is a scientific theory whereas IDT is not.

## Question 4

1 / 1 pts

Match each word to it's definition:

| | | |
|---|---|---|
| Correct! | Axon | the part of the nerve c |
| Correct! | Dendrite | a branch of a nerve ce |
| Correct! | Myelin sheath | an insulating layer of p |
| Correct! | Synapse | the area that covers e |
| Correct! | Neurotransmitter | the chemical substanc |

Other Incorrect Match Options:

- the principle that a specific function to localize on one side of the brain.

## Question 5

1 / 1 pts

Which of the below **is not** the main components of the nervous system?

Correct!

- (selected) Endorphins
- Brain
- Spinal cord
- Peripheral nervous system

Quiz score: **5** out of 5

Captured with Xnip

## Question 1

1 / 1 pts

Match the word to it's definition

Correct! **Addiction** — continuing to use drugs coı

Correct! **Tolerance** — developing a need for more

Correct! **Withdrawal** — physically and psychologica

## Question 2

1 / 1 pts

Match the sleep stages to what happens during that stage:

Correct! **Wakefulness** — Beta waves

Correct! **Just before sleep** — Alpha waves (same activity

Correct! **Stage 1 / N1** — Theta waves (can experien

Correct! **Stage 2 / N2** — Sleep spindles (slowed dow

Correct! **Stage 3/4 / N3/4** — Delta waves (slow -wave sl

Correct! **REM** — Beta waves (most vivid dre

## Question 3

1 / 1 pts

Sensation is comparable to _____ as perception is comparable to _____ .

- absolute threshold; difference threshold
- grouping; priming
- interpretation; detection
- Correct! bottom-up processing; top-down processing

## Question 4

1 / 1 pts

Which of the below **is** one of the Gestalt principles?

- Correct! Similarity
- Convergence
- Binocular disparity
- Motion parallax

## Question 5

1 / 1 pts

Which of the below is **correct** about coding of sensations in the Central Nervous System?

- Both intensity and quality coding depend only on the physical properties of the external stimulus
- Different sensory qualities are coded with how strongly a neuron fires
- Quality is coded with the amount of neurons firing at the same time
- Correct! Intensity is coded according to firing rates of neurons and the amount of neurons triggered

## Question 6

1 / 1 pts

Which is **correct** about sensory adaptation?

- Correct! It is the a tendency to respond less to unchanging stimuli
- Sensory adaptation does not happen in vision, otherwise objects that we look at for a long time would disappear
- It is related to how senses develop during infancy
- It is the adaptive ability of our senses to pick up on potentially threatening stimuli

Quiz score: **6** out o

Captured with Xnip

This attempt took less than 1 minute.

## Question 1

1 / 1 pts

An example to habituation would be _____whereas an example for sensitization would be _____.

- Being able to notice key changes after music lessons; Being very aware of your phone ringing when you are waiting for a call
- Feeling touch sensations more intensely after painful stimulus; No longer noticing the buzzing from a fluorescent light in the classroom.
- Not being able to smell your own perfume; Not noticing the sounds from the TV after an hour of studying in the same room
- Correct! No longer getting startled when the train passes after living near the train station for a month; A soldier returning from a warzone being hyper aware of unexpected loud sounds.

## Question 2

1 / 1 pts

Match the below concepts to their examples:

Options (in case of viewing issues):

- Accomplishing certain tasks is rewarded by giving the player special coins or more energy to help them do well in a video game.
- A child learns not to touch a hot stove after seeing a sibling do it.
- You set a ringtone for your best friend, and a separate ringtone for your morning alarm. You did not know either melody before. After a while, you hear them on the radio. You feel happy when you hear the first ringtone, and annoyed when you hear the second.

| | | |
|---|---|---|
| Correct! | **Classical conditioning** | You set a ringtone for |
| Correct! | **Operant conditioning** | Accomplishing certain |
| Correct! | **Observational learning** | A child learns not to to |

## Question 3

1 / 1 pts

An analogy for memory encoding is _____, storage is _____, and retrieval is _____.

- Save to disk; Write to file; Read from disk
- Save to disk; Read from disk; Write to file
- Read from disk; Save to disk; Write to file
- Correct! Write to file; Save to disk; Read from disk

## Question 4

1 / 1 pts

Sensory Memory is the activated memory that holds a few items briefly.

- True
- Correct! False

## Question 5

1 / 1 pts

Implicit memory is processed effortfully, and it requires attention.

- True
- Correct! False

## Question 6

1 / 1 pts

Episodic memory describes the explicit memory of facts and general knowledge; one of our two conscious memory systems

- True
- Correct! False

## Question 7

1 / 1 pts

Interference is the disruption of information retrieval.

- Correct! True
- False

Quiz score: 7 out of 7

Captured with Xnip

This attempt took 2 minutes.

## Question 1

1 / 1 pts

Heuristics provide us with the best possible decision most of the time

- True
- Correct! False

## Question 2

1 / 1 pts

If we assumed someone is covid + when they say they are ill during 2020-2022, we made a judgement based on the reason that comes to mind most easily: availability heuristic

- Correct! True
- False

## Question 3

1 / 1 pts

Which of the below definition is correct for the term?

- semantics – the study of word meanings and relationships
- syntax – when a patients ability to understand word meanings is impairede
- receptive aphasia – rules on how the individual units of language are organized
- Correct! expressive aphasia – when a patients ability to speak is impaired

## Question 4

1 / 1 pts

Psychometric approach to intelligence is developing and using standardized tests to measure mental abilities.

- Correct! True
- False

## Question 5

1 / 1 pts

Match:

| | | |
|---|---|---|
| Correct! | fluid intelligence | the ability to process i |
| Correct! | crystallized intelligence | the ability to use accu |
| Correct! | emotional intelligence | the ability to manage, |
| Correct! | analytic intelligence | the ability to problem |
| Correct! | creative intelligence | the ability of insight ar |
| Correct! | practical intelligence | the ability to effectivel |

Quiz score: 5 out of 5

Captured with Xnip

## Question 1

1 / 1 pts

Which of the below statements are **correct** about inductive and deductive reasoning?

Correct!

- (selected) Inductive reasoning starts with an observation to reach a more general theory
- "All bald men are grandfathers. Harold is bald. Therefore Harold is a grandfather" is an example of inductive reasoning
- Inductive reasoning formulates a falsifiable hypothesis to test the existing theory
- In science, we primarily use deductive reasoning

## Question 2

1 / 1 pts

The variable that is measured throughout the experiment is the _____
Clue: It may change as a result of your testing.

- Responsive Variable
- Controlled Variable
- Independent Variable

Correct!

- (selected) Dependent Variable

## Question 3

1 / 1 pts

A student is planning an experiment to find out how the height from which they drop a ball affects how high the ball bounces. What is the control variable?

Correct!

- (selected) The ball used
- Height of the ball being dropped
- The height the ball bounces

## Question 4

1 / 1 pts

A group of researchers want to make sure that any results they find in a particular group of participants would also be true for other people, in other places, in studies with other researchers. If a study can do this, we can say that the study has a high level of _____.

Correct!

- (selected) external validity
- reliability
- internal validity
- face validity

Quiz score: **4** out of 4

Captured with Xnip

## Question 1

1 / 1 pts

When sample averages are _____ and the difference between them is_____, it is more likely that the difference has statistical significance.

- reliable; small
- due to chance; large
- Correct! reliable; large
- due to chance; small

## Question 2

1 / 1 pts

To measure customer satisfaction with an online store, you could create a questionnaire with a set of statements that respondents must agree or disagree with. _____ tells you whether the statements are all reliable indicators of customer satisfaction.

- Internal validity
- Correct! Internal consistency
- Parallel forms reliability
- Test-retest reliability

## Question 3

1 / 1 pts

It is difficult to trust the results of observational research because it depends on self-reporting, and we cannot trust the participants to be truthful

- True
- Correct! False

## Question 4

1 / 1 pts

Indicate whether each association is a positive correlation or a negative correlation.

- If a study revealed that high self-esteem people were less anxious than low self-esteem people
- The more income rose among a sample of poor families, the fewer psychiatric symptoms their children experienced

- Positive; Positive
- Correct! Negative; Negative
- Negative; Positive
- Positive; Negative

## Question 5

1 / 1 pts

Perceiving a relationship where none exists, or perceiving a stronger-than-actual relationship is called _____ .

- weak
- Correct! an illusiory correlation
- positive
- strong

Quiz score: **5** out of 5

Captured with Xnip

## Question 1

1 / 1 pts

A researcher wants to investigate the effect of having a good ear for music on the ability to copy accents easily. If they test two groups of people with different levels of music perception and ask them to repeat sentences in different accent prompts, this would be a _____-subjects design. However, if they test the a group before and after a training for musical perception, this would be a _____-subject design

- within; between
- Correct! between; within

## Question 2

1 / 1 pts

Random assignment means that the participants are assigned to each experimental group by matching certain personal variables like age, education, etc.

- True
- Correct! False

## Question 3

1 / 1 pts

A single factor design can be used to examine treatment variations and can combine a series of independent studies into one, for efficiency.

- True
- Correct! False

## Question 4

1 / 1 pts

Choose all that can qualify for small-N studies:

- [ ] A non-equivalent control group design from a company with employees in 3 different branches
- [ ] A study tracking the duration of breast-feeding of children and looking at the possible correlations with their later academic achievement
- Correct! [x] A psychophysics study where sound threshold of participants is measured.
- Correct! [x] A case study with a neurological patient

## Question 5

1 / 1 pts

If a quasi-experimental design follows a pattern of "Observation$_1$ – Treatment - Observation$_2$", with the control group following the same pattern without any Treatment, this is called _____.

- Nonequivalent control group interrupted time-series design
- Pretest/posttest design (AB design)
- Interrupted time-series design
- Correct! Nonequivalent control group pretest/posttest design

Quiz score: **5** out of 5
